

Project Executable Files

Date	15 March 2026
Team ID	XXXXXX
Project Name	CardApprove AI – Credit Card Auto Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	Yes
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Overview of the project's file and folder structure:

├── app/ │ ├── api/predict/route.ts │ ├── page.tsx │ ├── predict/page.tsx │ ├── result/page.tsx │ └── about/page.tsx ├── components/ │ ├── predict-form.tsx │ ├── result-card.tsx │ └── navbar.tsx └── web/ │ └── app.py	- Next.js frontend (App Router) - Server-side proxy to the Flask backend - Landing page - Prediction form page - Prediction result page - About page - Shared React UI components - Form + API call to /api/predict - Renders the prediction result - Flask backend (API-only) - Flask API: GET /health, POST /predict
--	--

├── requirements.txt	- Python dependency declarations
├── .env.example	- Backend runtime env vars
├── models/final_credit_model_pipeline.pkl	- Trained ML pipeline (git-ignored)
├── static/img/	- EDA plots
├── .env.example	- Frontend env vars (FLASK_API_URL)
└── package.json	- Next.js project config

Step 3: Deployment / Access Details

Hosted / Deployed URL	Frontend: https://credit-card-auto-approval-prediction.vercel.app/ Backend API: https://credit-approval-api-fb03.onrender.com
Login Credentials (Demo)	N/A – the app has no authentication system; open access for evaluation
Platform / Hosting Provider	Vercel (frontend) + Render (backend Flask API)
Repository Link	https://github.com/RevanthBoina/Credit-card-Auto-Approval-prediction
Demo Video Link	https://drive.google.com/file/d/1OThfc4C0yitLs4-tf6S8fjSw_ibc6tZu/view?usp=sharing

Step 4: Run Instructions

Step-by-step instructions for the evaluator to run the project locally:

Pre-requisites:

- Node.js 18+
- Python 3.9+

Step 1: Clone the repository

```
git clone https://github.com/RevanthBoina/Credit-card-Auto-Approval-prediction.git
cd Credit-card-Auto-Approval-prediction
```

Step 2: Start the backend (Flask API) – Terminal 1

```
cd web
python3 -m venv .venv && source .venv/bin/activate
pip install --upgrade pip && pip install -r requirements.txt
# place the trained pipeline at web/models/final_credit_model_pipeline.pkl
cp .env.example .env
python app.py
# Runs on http://127.0.0.1:8080 - verify with: curl http://127.0.0.1:8080/health
```

Step 3: Start the frontend (Next.js) – Terminal 2, from repo root

```
pnpm install
cp .env.example .env.local # set FLASK_API_URL=http://127.0.0.1:8080
pnpm dev
```

Step 4: Open the app

<http://localhost:3000>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Backend is not yet containerized (no Dockerfile)	Planned on roadmap; currently deployed directly on Render
2	No automated test suite for the /predict endpoint yet	Planned on roadmap
3	Trained model file (final_credit_model_pipeline.pkl) is git-ignored due to size	Must be added manually / baked into each deployment separately
